

MEGAN BLEVINS

Web/App Developer

PROFILE

I am a full-stack developer who loves to make websites and web apps that look and function quickly, smoothly and beautifully. I have a wide range of knowledge and skills and have a unique ability to learn quickly and adapt to new technologies and workflows easily. I have a strong personal drive to excel at any task I am given, but also love working with a group of skilled teammates to accomplish our goals. And I would love to join your team!

PRO SKILLS

FRONTEND

Vue	Gulp
Nuxt	Composer
React	Accessibility
Meteor	SCSS & Less
JS & jQuery	Grid & Flexbox
Bootstrap	HTML/CSS
Foundation	

BACKEND

PHP	MySQL
Python	MariaDb
C#	SQL Server
Laravel	Jenkins
Django	Vagrant Docker
.NET	Mamp Pro
	Parallels

CMS

Magento 1 & 2	Netlify CMS
Headless Magento	Umbraco
Wordpress	Pimcore
Shopify	
Umbraco	

SYS OPS & OTHER

MySQL	Digital Ocean
MariaDB	AWS
MSSQL Server	Azure
Netlify	Git
	Linux

EXPERIENCE

2019 - NOW. WEB DEVELOPER AT MARLIN NETWORK

Most of the sites through Marlin Network are running on Umbraco, a C# CMS Platform. While working on customizing Umbraco sites, I spent the majority of my time working with SmuckerAwayFromHome.com on a Pimcore(PHP)-based website. In June, 2020 we will release a headless cart e-commerce integration through Magento. This integration was almost exclusively worked on by me. Another notable project created by me through Marlin is the MelFry landing page done for Ventura Foods. It was a very complex scroll-based design written in Nuxt/Vue.js using Scroll Magic. We also are in the process of moving all of our sites from local servers to a cloud-based server environment on Azure.

2018 - 2019. WEB DEVELOPER AT WEBARC TECHNOLOGIES

Working at WebArc Technologies I created and maintained highly custom websites on both the Wordpress and Magento platforms. The most notable project was to create a completely custom multi-warehouse inventory management system using the Laravel framework. Other projects include custom modules for the Magento platform, as well as migrating Magento 1.x sites to the new 2.3 version with my focus being mostly on the database scripts. Additionally, I created advanced Wordpress sites following intricate designs. These sites included image mapping, gated content, and countless custom variables to create beautiful dynamic websites.

2017 - 2018. LEAD WEB DEVELOPER FRANK AND MAVEN

As the lead developer for Frank and Maven, I managed nearly 100 unique web servers and nearly 130 different websites. Most of these were on the Wordpress platform, while others were e-commerce sites on Magento, Shopify and even completely custom frameworks. My role was not only one to complete the technical aspects of the job, but also to help advise and communicate with clients on their technical/web needs.

EDUCATION

2008 - BS IN BROADCAST MEDIA. UNIVERSITY OF CENTRAL MISSOURI
